Market Basket Analysis

- Understand **customers**
 - Purchasing habits, sensitivity to price, promotions
- Understand **products**
 - Co-purchases, fast/slow movers
- Take action: promotions, store layout, ...

Transactions contain items, which can be grouped into itemsets

- Transactions
 - Sets of items bought by customers
- The Goal
 - Determine associations between groups of items bought by customers
- Quantification of the Level of Association
 - Frequencies of sets of items
- The Discovered Sets of Items
 - Large itemsets, frequent itemsets, or frequent patterns

“Transaction” is a general concept

Items	Transactions
Groceries	Grocery cart
University courses	Transcript of courses taken
Guests	Party
Actors	Movies
Symptoms	Patient
Streamed songs	Streaming subscriber
Words	Document
Liked photos	Instagram account

Applications

- Supermarket Data
 - Target marketing, shelf placement
- Text Mining
 - Identifying co-occurring terms
- Generalization to Dependency-oriented Data Types
 - Web log analysis, software bug detection
- Other Major Data Mining Problems
 - Clustering, classification, and outlier analysis

Association rules

- Generated from **frequent itemsets**
- Formulation $X \Rightarrow Y$
 - $\{\text{Soy latte}\} \Rightarrow \{\text{Brown Sugar}\}$
 - $\{\text{Kale, Quinoa}\} \Rightarrow \{\text{Almond milk}\}$
- Applications
 - Promotion
 - Shelf placement
- Conditional Probability $P(Y|X) = \frac{P(X \cap Y)}{P(X)}$

Association rule mining

- U is a set of d items
- T is a set of n transactions T_1, T_2, \dots, T_n
with $T_i \subseteq U$
- **Itemset**: a set of items
- **k-itemset**: a set of k items

How many different k-itemsets exist? 2^k

Binary representation of a transaction

tid	Set of items	Binary representation
1	Bread, Jam, Juice	110010
2	Tofu, Juice, Tomatoes	000111
3	Bread, Strawberries, Tofu, Juice	101110
4	Tofu, Juice, Tomatoes	000111
5	Strawberries, Juice, Tomatoes	001011

Support of an Itemset

Definitions

- **Support of itemset l** , written $sup(l)$:
the fraction of transactions in the database $T = \{T_1 \dots T_n\}$ that contain l as a subset.
- **Frequent itemset mining with support minsup:**
Given a set of transactions $T = \{T_1, \dots, T_n\}$,
where $T_i \subseteq U$, find all itemsets l_j such that $sup(l_j) \geq minsup$

Example

tid	Set of items
1	Bread, Jam, Juice
2	Tofu, Juice, Tomatoes
3	Bread, Strawberries, Tofu, Juice
4	Tofu, Juice, Tomatoes
5	Strawberries, Juice, Tomatoes

- $\text{sup}(\{\text{Bread, Juice}\}) = 2/5 = 0.4$
- $\text{sup}(\{\text{Strawberries, Tomatoes}\}) = 1/5 = 0.2$
- If $\text{minsup}=0.3$, $\{\text{Bread, Juice}\}$ is a frequent itemset

Exercise: compute support

TID	Items
100	1 3 4
200	2 3 5
300	1 2 3 5
400	2 5

- Write the support of every 2-itemset and 3-itemset occurring in this database
- Indicate which are frequent itemsets if $minsup = 1/2$

Spreadsheet links: <https://upfbarcelona.padlet.org/chato/hogch321o6pws1fd>

Properties

- The smaller minsup is, the larger the number of frequent itemsets

Support monotonicity property:

$$\text{if } J \subseteq I, \text{sup}(J) \geq \text{sup}(I) \quad \text{WHY?}$$

Properties

- Support monotonicity property:
$$\text{if } J \subseteq I, \text{ sup}(J) \geq \text{sup}(I)$$
- Confusingly, some authors refer to this as the support anti-monotonicity property
- Downward closure property

Every subset of a *frequent* itemset is also *frequent*

Closed and Maximal Itemsets

Closed itemset

An itemset is **closed** if all itemsets containing it are **strictly less frequent**

tid	Set of items
1	Bread, Jam, Juice
2	Tofu, Juice, Tomatoes
3	Bread, Strawberries, Tofu, Juice
4	Tofu, Juice, Tomatoes
5	Strawberries, Juice, Tomatoes

Find a closed itemset in this set of transactions

Closed itemset

An itemset is **closed** if all itemsets containing it are **strictly less frequent**

tid	Set of items
1	Bread, Jam, Juice
2	Tofu, Juice, Tomatoes
3	Bread, Strawberries, Tofu, Juice
4	Tofu, Juice, Tomatoes
5	Strawberries, Juice, Tomatoes

$$\text{sup}(\{\text{Bread, Juice}\}) = 2$$

$$\text{sup}(\{\text{Bread, Juice, Jam}\}) = 1$$

$$\text{sup}(\{\text{Bread, Juice, Strawberries}\}) = 1$$

$$\text{sup}(\{\text{Bread, Juice, Tofu}\}) = 1$$

$\{\text{Bread, Juice}\}$ is a closed itemset

Maximal itemset

An itemset is **maximal** if:
it is closed and
it has support \geq minsup

tid	Set of items
1	Bread, Jam, Juice
2	Tofu, Juice, Tomatoes
3	Bread, Strawberries, Tofu, Juice
4	Tofu, Juice, Tomatoes
5	Strawberries, Juice, Tomatoes

Exercise

Find three **maximal** frequent itemsets at minsup=0.4

Tip: first find all frequent itemsets at minsup=0.4

Maximal itemset

An itemset is **maximal** if:
it is closed and
it has support \geq minsup

tid	Set of items
1	Bread, Jam, Juice
2	Tofu, Juice, Tomatoes
3	Bread, Strawberries, Tofu, Juice
4	Tofu, Juice, Tomatoes
5	Strawberries, Juice, Tomatoes

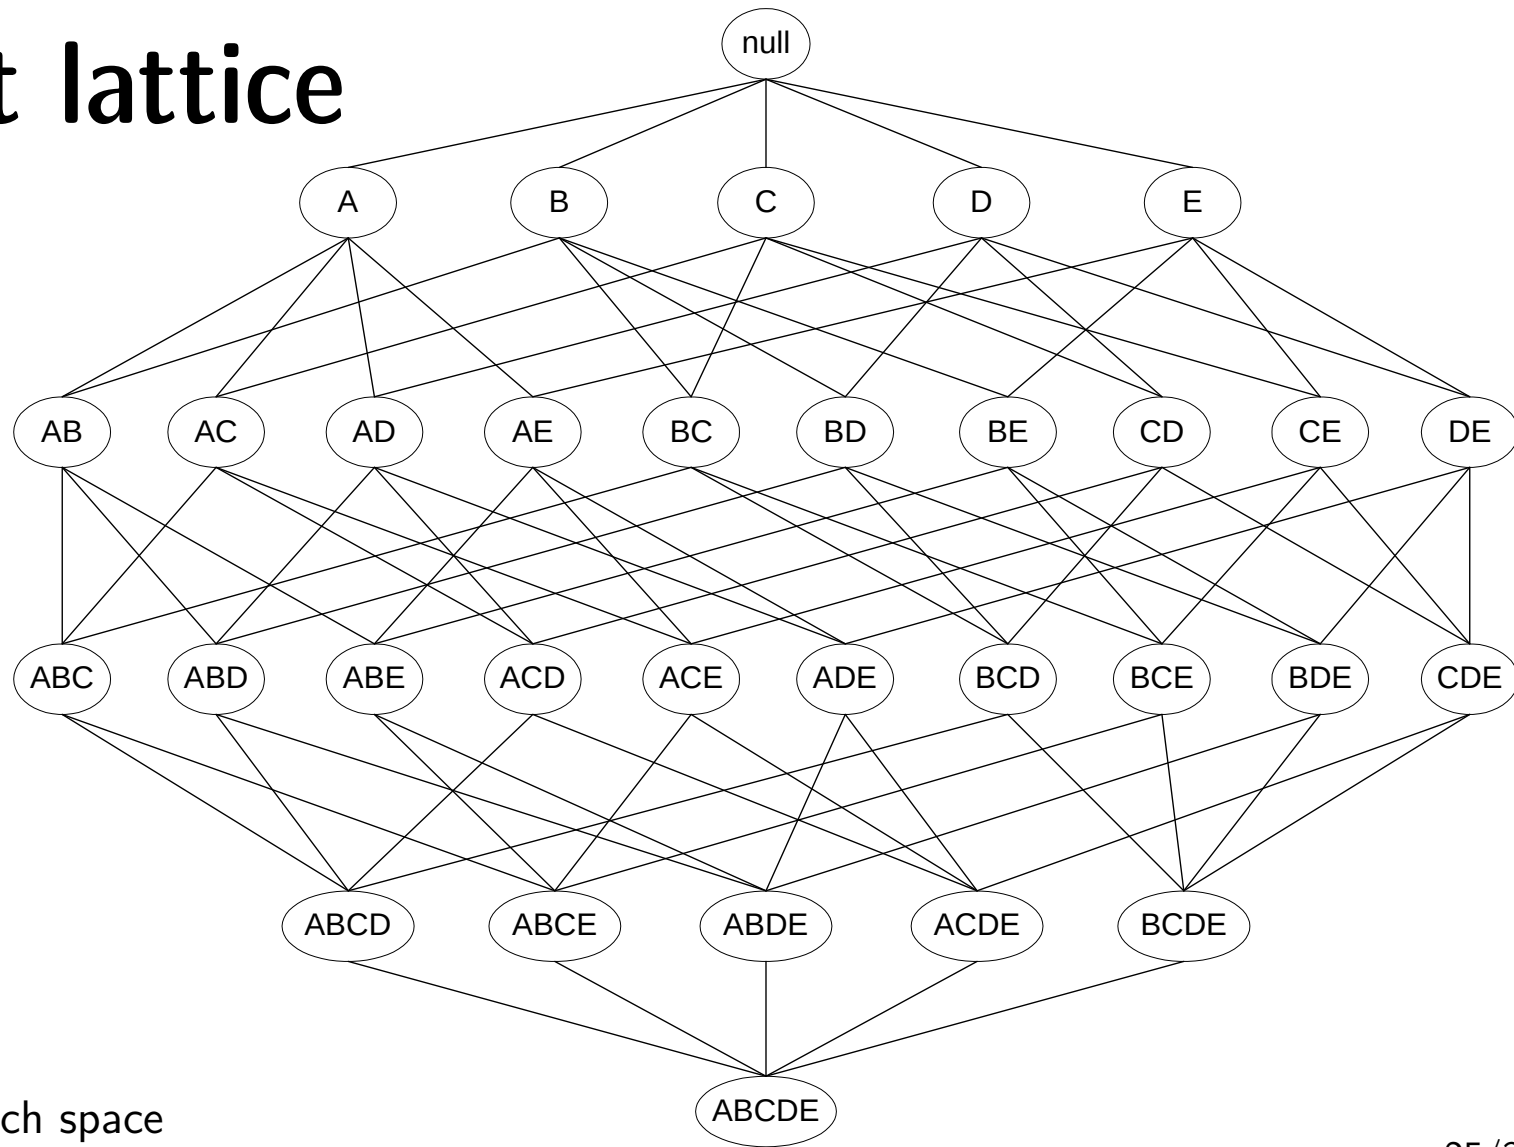

Maximal itemsets

{Bread, Juice}, {Strawberries, Juice}, {Tofu, Juice, Tomatoes}

... are **condensed** representations of frequent patterns, but do not retain information about the support of their subsets.

The Itemsets Lattice

The itemset lattice

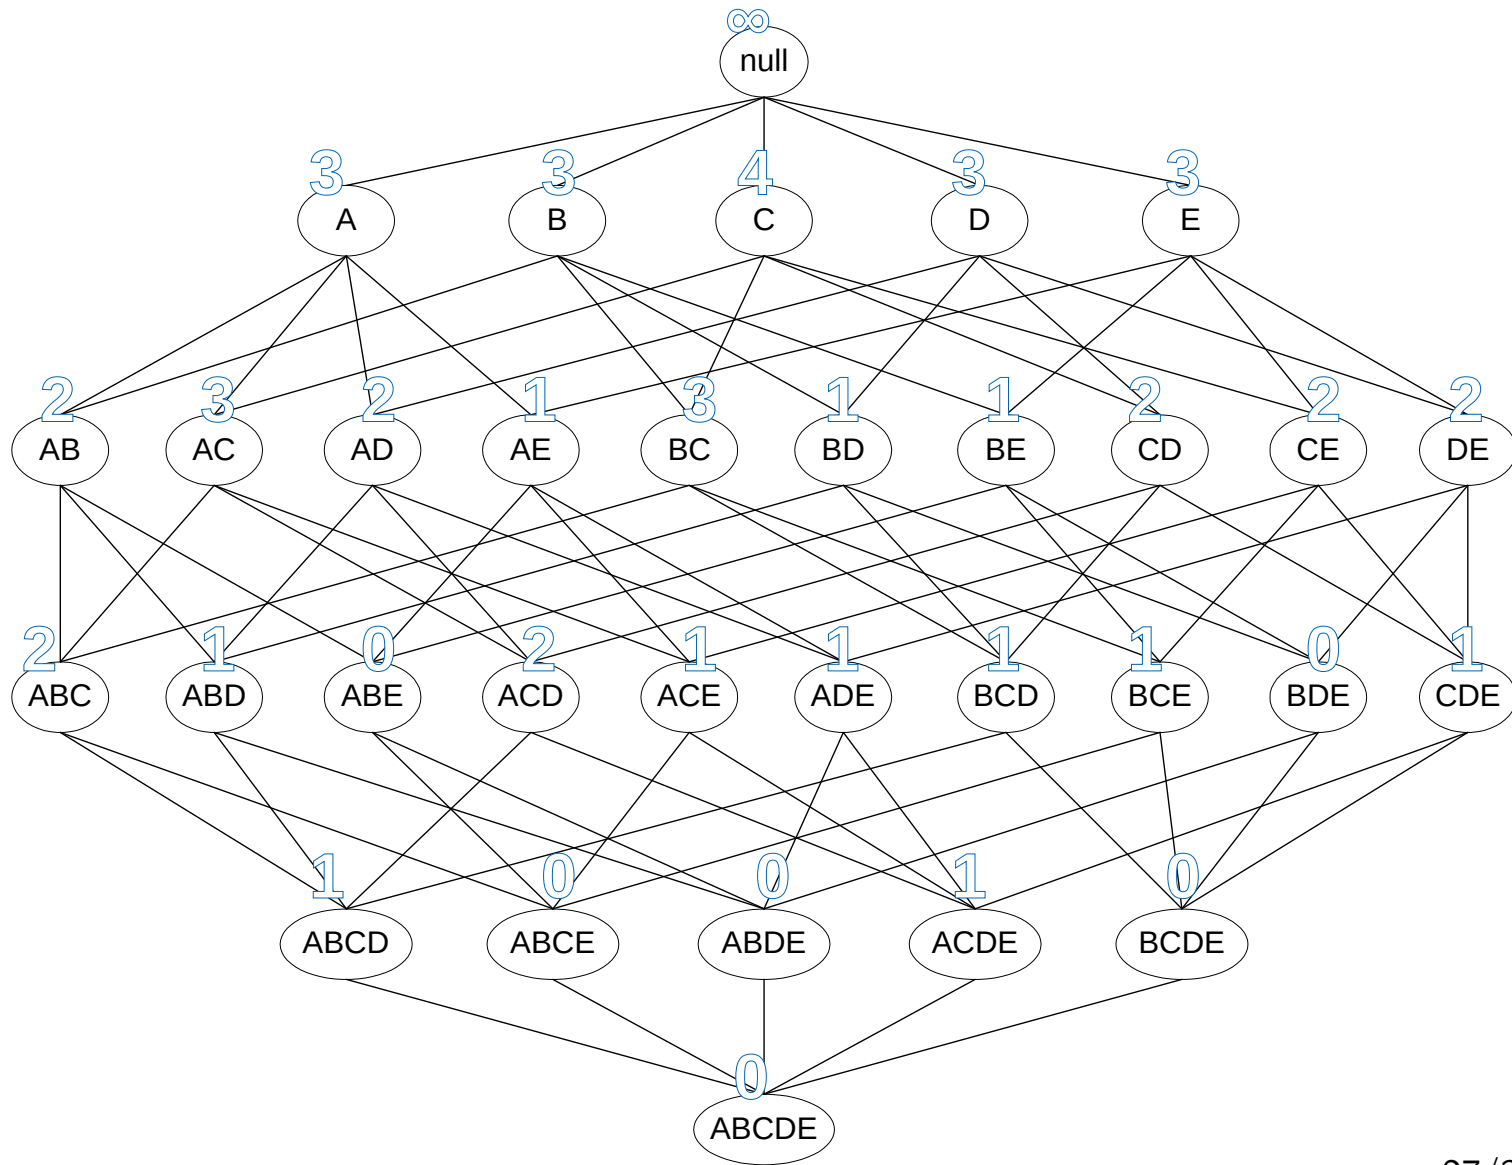

$2^{|U|}$ nodes representing search space

TID	Items
1	ABC
2	ABCD
3	BCE
4	ACDE
5	DE

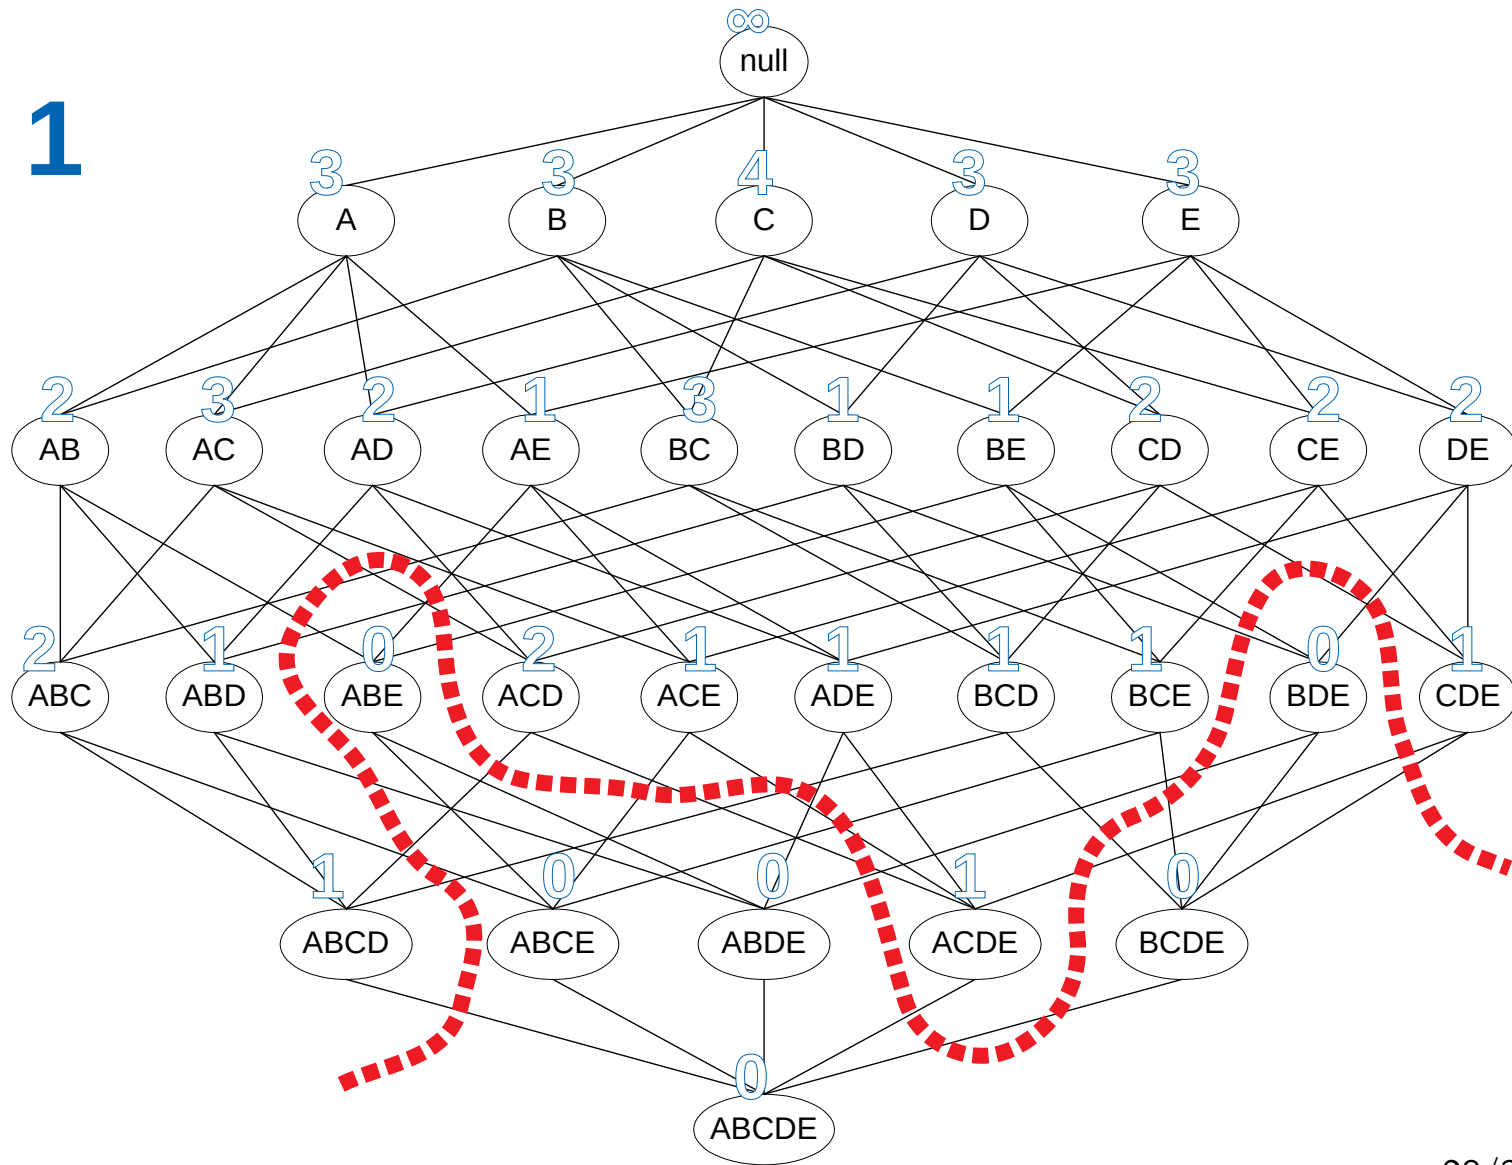

Support of each itemset

TID	Items
1	ABC
2	ABCD
3	BCE
4	ACDE
5	DE

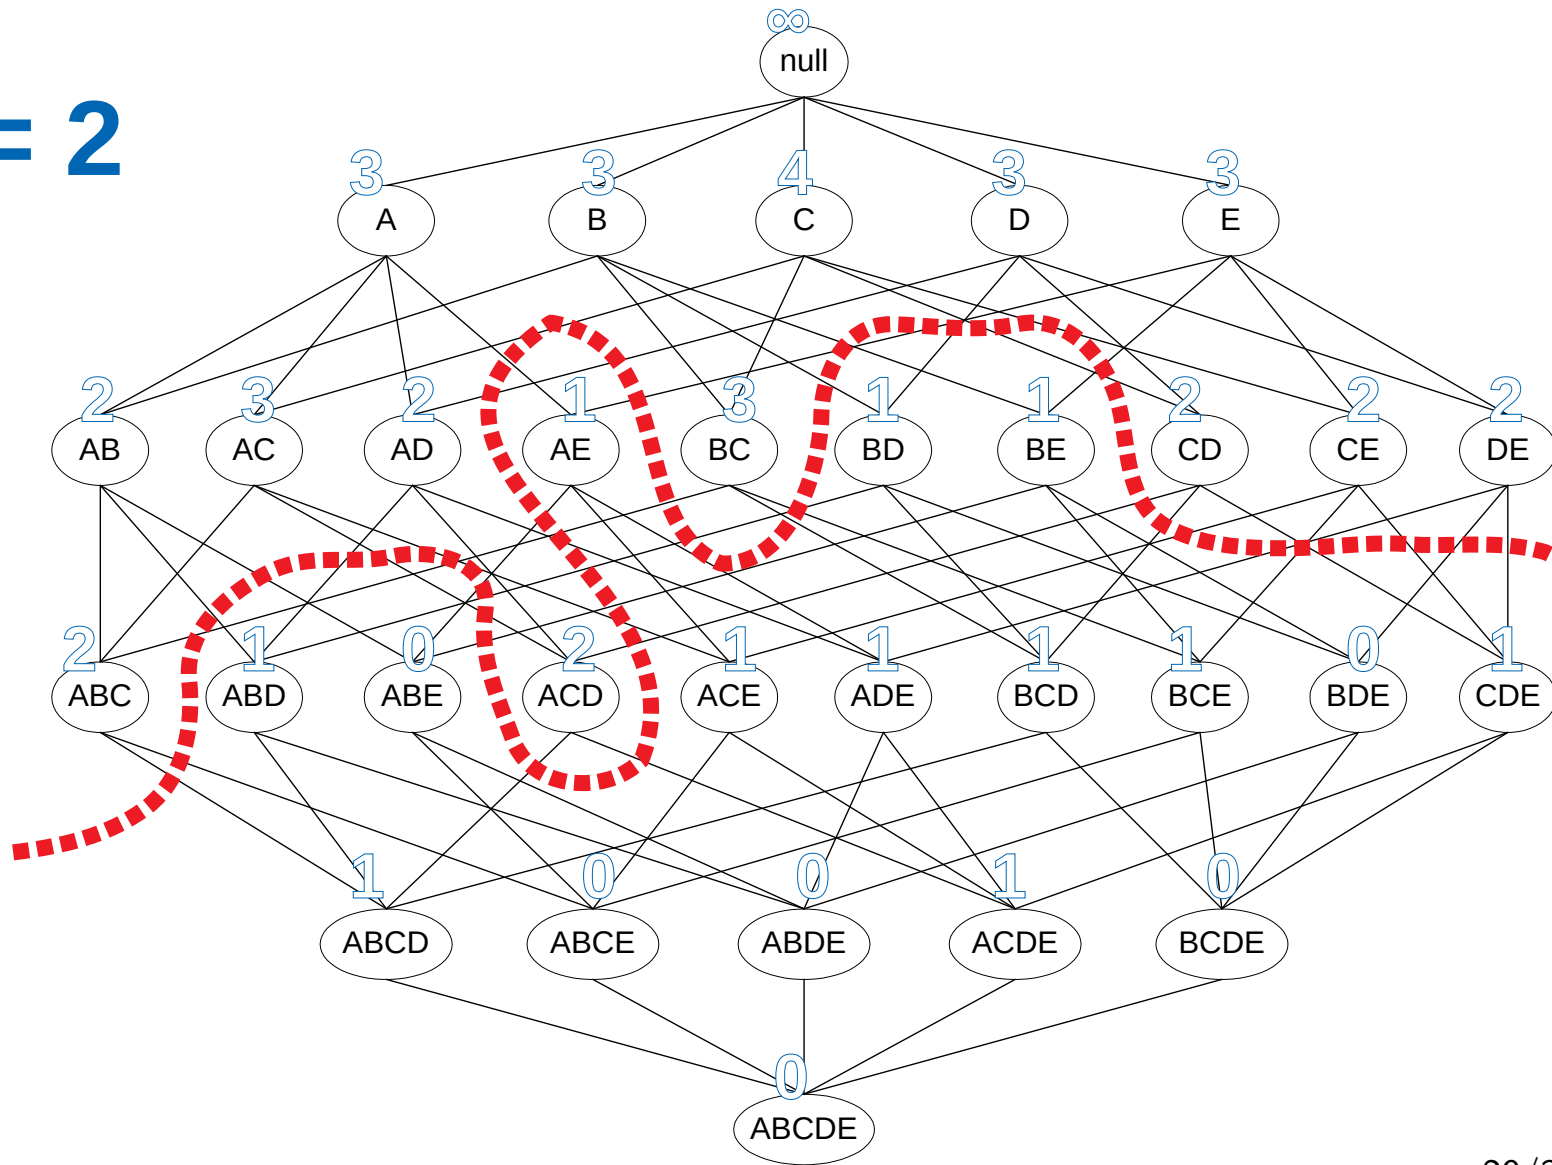

minsup = 1

TID	Items
1	ABC
2	ABCD
3	BCE
4	ACDE
5	DE

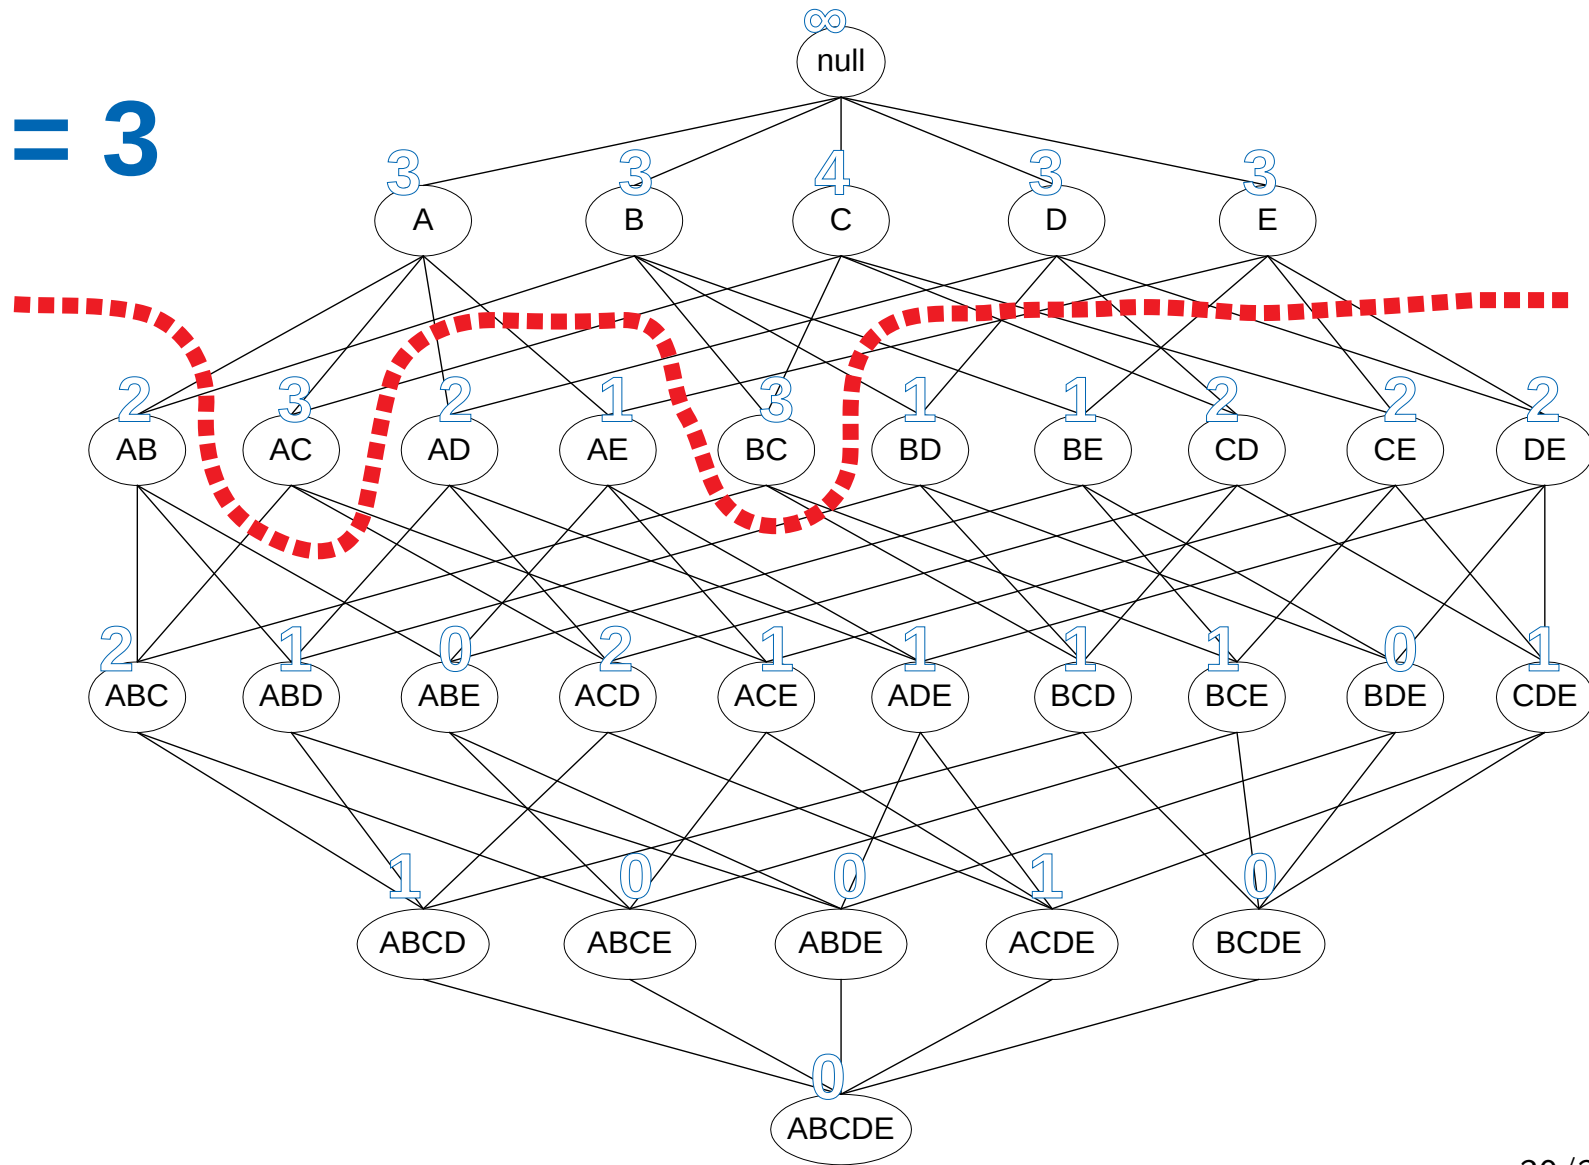

minsup = 2

TID	Items
1	ABC
2	ABCD
3	BCE
4	ACDE
5	DE

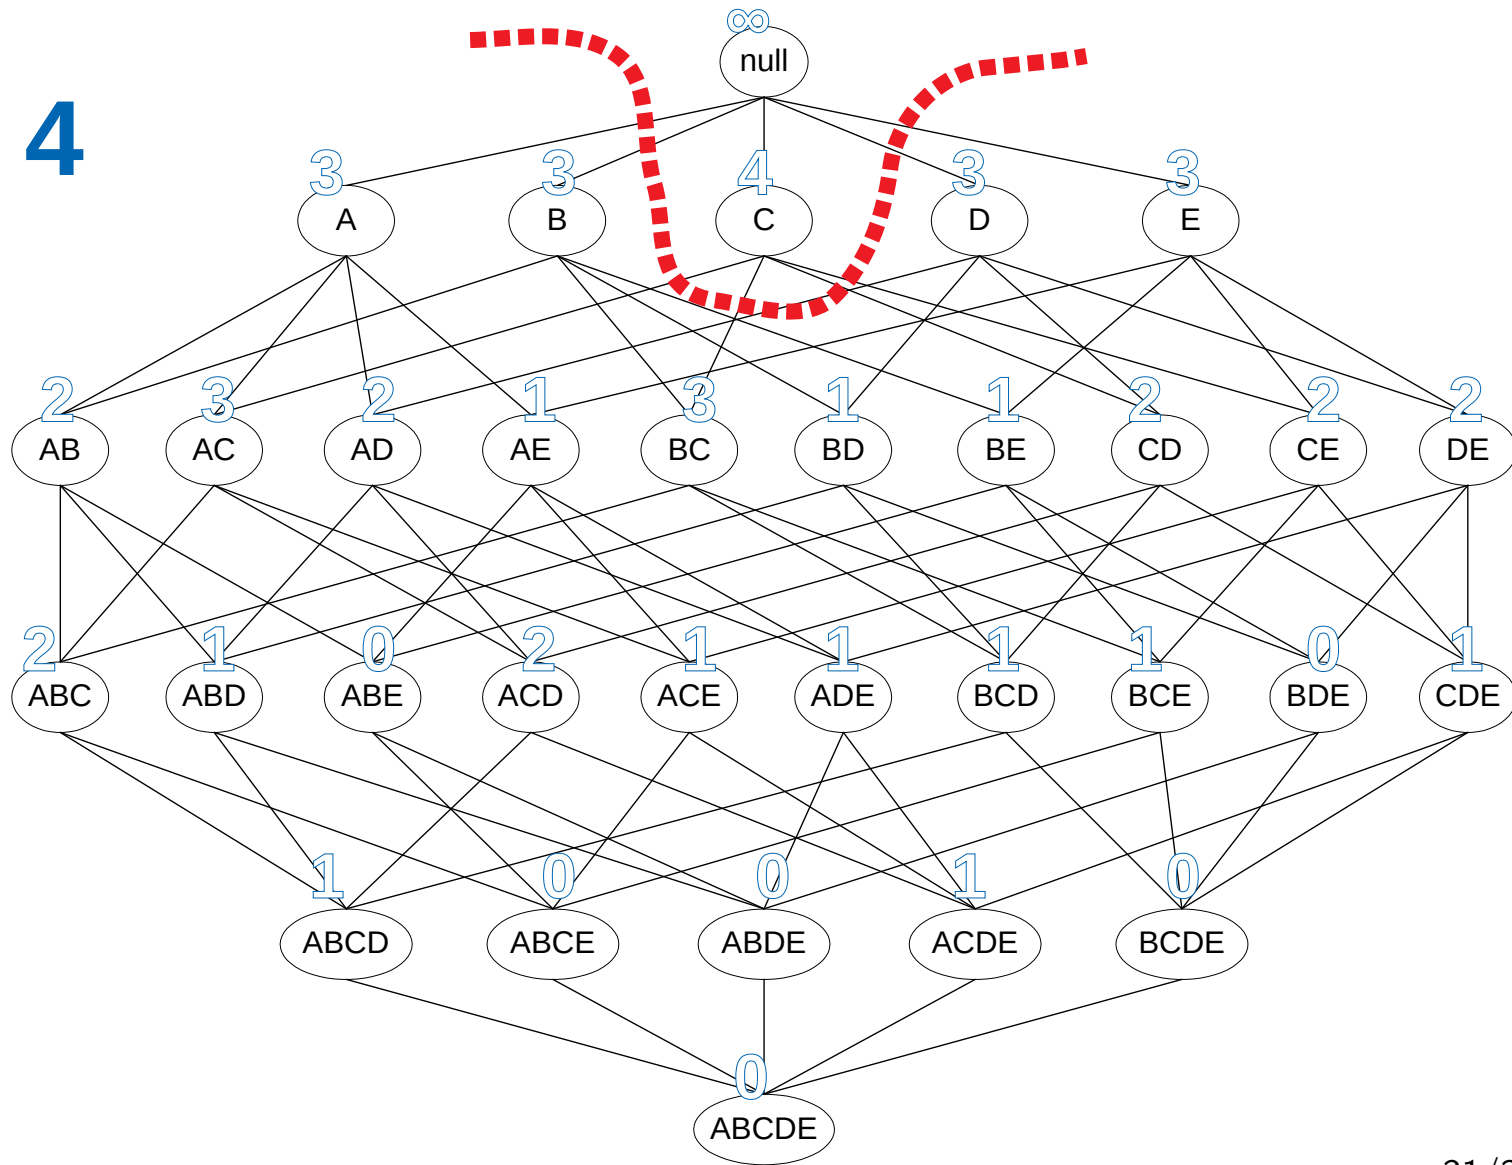

minsup = 3

TID	Items
1	ABC
2	ABCD
3	BCE
4	ACDE
5	DE

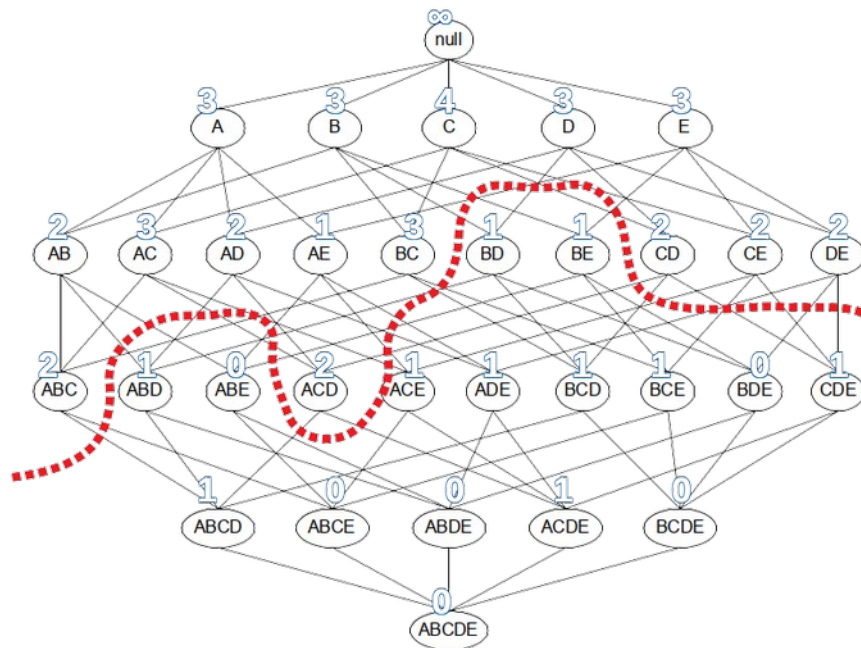

minsup = 4

TID	Items
1	ABC
2	ABCD
3	BCE
4	ACDE
5	DE

The border is a graph cut and ...

- All itemsets **above** the border are **frequent**
- All itemsets **below** the border are **not frequent**
- All **maximal** frequent itemsets are adjacent to the border
- Any border respects the **downward closure** property

Summary

Things to remember

- Itemset, k-itemset, transaction, support
- Support monotonicity property
- Maximal and closed itemsets
- Itemset lattice

Exercises for TT11-TT12

- Data Mining, The Textbook (2015) by Charu Aggarwal
